

The Complete Professional Connected Home Solution

Integrated with Video-Enabled Security for Total Life Management

Make the smart choice with the RISCO end-to-end cloud-based connected home solution. With RISCO's unique offering, you can now provide even more for your customers:

- A professional security system that combines video monitoring.
- Energy Management for smart temperature control.
- Smart Access of door locks and garage doors.
- Control of lighting, shutters and appliances.

All managed from a single, intuitive smartphone app!

The RISCO Smart Home is the smart choice for a streamlined lifestyle that delivers modern convenience and peace of mind.

Smart Choices, Unlimited Opportunities

Provide the Best Security Solution

Provide your customers with a winning combination that includes a professional RISCO security system and fully integrated home management solution. Along with a smartphone app and video verification, you can now deliver the best connected home offering that will put you in the lead.

Upgrade any System to a Smart System

The Smart Home can be integrated as an add-on to all RISCO systems. Via the RISCO cloud, you can seamlessly provide upgrades for new and existing customers.

Enjoy Full Flexibility with Unified Technology

RISCO provides a unified technology platform that can be integrated with all of RISCO's security systems. This means you enjoy full flexibility when it comes to choosing the panel that fits your needs.

A Digital Life, at Your Fingertips

You can automate your daily routine by customizing a range of life and security scenarios - all from a single intuitive interface on your smartphone app!

Here are some examples of the endless possibilities available via the RISCO Smart Home:

Manual Activation

- **“Leaving Home”** – You can combine a range of automatic actions for when you leave the house in the morning, including turning off the lights, arming the system, and managing climate control – all from the touch of a button on your smartphone app!
- **“Coming Home”** – Come home to instant ease with a single click to disarm the security system, open the garage door, and turn on the heat and lighting.

Scheduled Activation

- **“Wake Up”** – You can predefine daily events according to your routine, waking up in the morning to a Smart Home that automatically disarms the security system, brews coffee and opens the shades to let in the sunshine.
- **“Vacation Mode”** – Just because you’re on vacation doesn’t mean your security system is. The Smart Home can be set to mimic regular activity – such as turning on/off the lights and shades – when you’re away on vacation, to dissuade potential burglars from entering.

Triggered Activation

- **“Alarm Notification”** – You can customize actions to be triggered in response to specific events, such as instant video verification in the case of a burglary and turning on the lights automatically when the alarm is activated.
- **“Family Check In”** – You can streamline everyday family activity by creating triggered scenarios, such as when your children use a designated code to disarm the system that simultaneously sends you a notification and turns on the lights/heating in the house.
